ABSTRACTED-PUB-NO: EP 1167623A

BASIC-ABSTRACT:

NOVELTY - A papermaking felt comprises ground fabric layer composed of woven fabric, and a fibrous web (3) placed on at least one side of the ground fabric layer. The ground fabric layer and fibrous web are integrally intertwined by needling. The ground fabric layer has warp and weft, each comprising distributed yarns, at least part of which consisting of straight yarns.

USE - For squeezing water from paper web in papermaking operation.

ADVANTAGE - The felt can retain its three-dimensional character even in a high speed papermaking machine in which the felt is subjected to compression repeatedly in a short period.

DESCRIPTION OF DRAWING(S) - The figure is a schematic, enlarged, sectional view of a felt.

Ground fabric layer 2

Fibrous web 3

Warp 2a

Weft 2b

Winding yarns K

Straight yarns S
